## Introduction

Capula specialises in advanced automation control and real-time IT solutions for Energy and Utility companies.

As an independent systems integrator we have developed an enviable position in the nuclear industry; providing control and IT solutions over a period of nearly 40 years, including many complex control systems at Sellafield.

With over 250 engineers, we are recognised for innovation, project delivery, quality and safety. We design, deliver and support systems that are mission critical for our clients, drawing on over 40 years' experience to provide pragmatic solutions in a complex market.

Capula is part of Imtech - a European technical services provider with a €5.1bn turnover and over 28,000 staff (including 3,800 in the UK).

## Capabilities

Capula specialises in advanced automation control and real-time IT solutions for the Energy and Utilities markets, with nearly 40 years' experience throughout the nuclear lifecycle. Our unique blend of skills and experience has seen us successfully delivering many control system and IT infrastructure projects for a range of key clients (including Sellafield, British Energy, UKAEA, Magnox North, Magnox South, AWE, Urenco Chem Plants & Urenco UK). Capula's information management systems enable process optimisation, reduced down-time and improved asset utilisation.

As an independent system integrator, we can select the best hardware/software solution for complex projects to drive process performance, improve energy management and manage regulatory compliance.

To illustrate Capula's experience within the industries we operate:

**Nuclear** - Capula has supplied the majority of the control systems installed to track and manage the reprocessing of material on site at Sellafield in the last 13 years.

We also work in a number of other highly regulated industries such as:

**Power Generation** - Systems supplied by Capula control the generation of electricity to 30 million people

**Transmission & Distribution** - Capula's solutions and 24/7 support control substations throughout the electrical transmission network.

**Water** - Capula's telemetry expertise supports the supply of clean water to over 25 million people.

**Oil & Gas** – 'Real-time intelligence' systems have enabled productivity and improved safety in the North Sea oil fields.

## **We're here looking for:**

Capula is an active member of Britain's energy coast and, as a company, we look to invest in the areas we work. We have an office employing over 20 staff at Westlakes Science & Technology Park near Whitehaven, which has grown over time and we see this growth continuing into the future.

We use the Business Cluster to network with clients, peers and the supply chain in order to remain up to date with activities in the region and how we might help to assist, collaborate or resolve issues.
