Introduction

We use small behavioural and technological interventions that help people work together more effectively in multi-stakeholder environments.

Capabilities

For many years, Collaboration Ltd has been providing services into the heart of multi-national business organisations as well as third sector and NGO environments. In these settings, our emergent specialism has been to draw out and nurture localised knowledge and talent in a manner that encourages and enables people to work together across temporal, geographical, class and cultural divides.

We leverage neuro linguistic programming (NLP) for behavioural interventions along with interactive multi-media for technological interventions.
