**METALWORK
SOLUTIONS (UK)**

Introduction

Metalwork Solutions has experienced draughtsmen, fabricators and on-site fitters ready to design and fabricate most metal projects from industrial steel buildings, to more bespoke secondary steel projects.

It was one of the first local fabrication businesses to acquire CE Marking at Execution Class 4 before the deadline of July 2014 and also achieved ISO 9001:2008 at the same time, so quality and health and safety standards are of paramount importance.

Capabilities

The Business was established in 2006 by Paul Jefferson, a Managing Director with over 30 years' experience in fabrication and project management. The business has grown steadily and now employs 12 people including 1 apprentice.

Based to the West of Carlisle and less than a mile from the CNDR Bypass, the company often carries out work in West Cumbria. Being a local business, run by Cumbrian people, there is a real focus on working locally and supporting the local economy and the fellow businesses operating in the area.

Metalwork Solutions is a main contractor and a sub- contractor depending on client requirements. Completed projects include Albion Square in Whitehaven (pictured) for Morgan Sindall. Various works have also been carried out for large contractors on projects such as the local Education Academies, for Kier Group and Westlakes Science Park.
